Core technologies

Java & Spring Boot

React & TypeScript

Python & FastAPI

PostgreSQL & SQL

JPA & MyBatis

Systems & delivery

Docker & Kubernetes

Jenkins & GitHub Actions

RabbitMQ & Apache Airflow

OAuth2 & Spring Security

ELK / APM & SonarQube

AI engineering

LangChain & ChromaDB

Ollama & local LLMs

RAG pipelines

OpenAI APIs

Quality & testing

JUnit & Mockito

Jest & Cypress

FitNesse

CI/CD quality gates

Experience

Société Générale GSC

Software Engineer | November 2022 - Present

MyKRI / Operational risk platform

February 2025 - Present

- Built a distributed microservices platform for near-real-time monitoring of enterprise operational risk indicators.
- Developed Java, Spring Boot, PostgreSQL and MyBatis services for batch processing and complex aggregation workflows.
- Delivered REST APIs and React interfaces for template-driven risk metrics, bulk updates and entity-level configuration.
- Operated services on Kubernetes; strengthened reliability with OAuth2, ELK/APM, HikariCP connection pooling and S3 integration.

MyCyberRisk / Cybersecurity remediation platform

November 2022 - February 2025

- Built a centralized platform to ingest, classify and remediate cybersecurity anomalies with end-to-end lifecycle visibility.
- Designed a metadata-driven workflow engine using a finite state machine, enabling new processes without code changes.
- Engineered ingestion and enrichment pipelines, dynamic SpEL rules, RabbitMQ messaging and REST integrations.
- Established Docker / Jenkins delivery on Kubernetes and automated testing with JUnit, FitNesse and Cypress; enforced SonarQube quality gates.

Selected projects

CreatorHub

Secure social platform backend with JWT, Google OAuth, versioned migrations and paginated feeds.

AI Document Chatbot

Local PDF question answering with vector embeddings, ChromaDB retrieval and a FastAPI backend.
